Periodic acid oxidizes citric acid very slowly. It is difficult to define the exact end of the reaction because the oxidizing reagent attacks over a long period the products as they appear. The reaction of the medium influences clearly the speed of periodic oxidation of citric acid; the maximum speeds observed are at about pH 4.0 - 5.0, and it seems to be independent of the (Chemistry--Organic, TT, v. 11, no. 10) (over)
